

1. Question

Write a Java program which reads marks of five subjects through command line and prints the total and average.

Given Program

The program uses the Scanner class to read five subject marks from the console, calculates their total, and then calculates and displays the average.

2. Steps for Execution

1. Install Java JDK on the system.

2. Open a Java IDE such as Eclipse, IntelliJ IDEA, NetBeans, or VS Code.

3. Create a Java file named:

ClassMarks.java

4. Enter the given Java program.

Save the program.

5. Compile the program using:

```
javac ClassMarks.java
```

6. Run the program using:

```
java ClassMarks
```

7. The program asks the user to enter marks for five subjects.

8. Enter the marks one by one.

9. The program calculates:

- Total marks

- Average marks

10.The calculated total and average are displayed on the console.

3. Algorithm

Step 1: Start the program.

Step 2: Import the Scanner class.

Step 3: Create a Scanner object to read input from the keyboard.

Step 4: Read the marks of five subjects:

m1, m2, m3, m4, m5

Step 5: Calculate the total:

Total = m1 + m2 + m3 + m4 + m5

Step 6: Calculate the average:

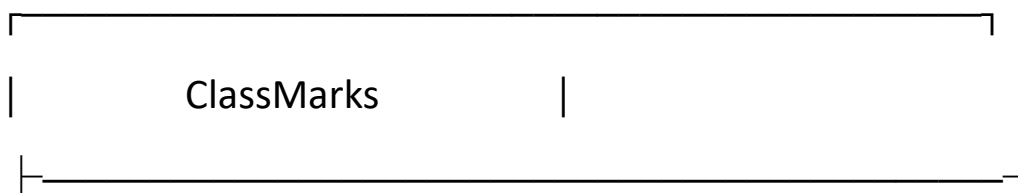

Average = Total / 5.0

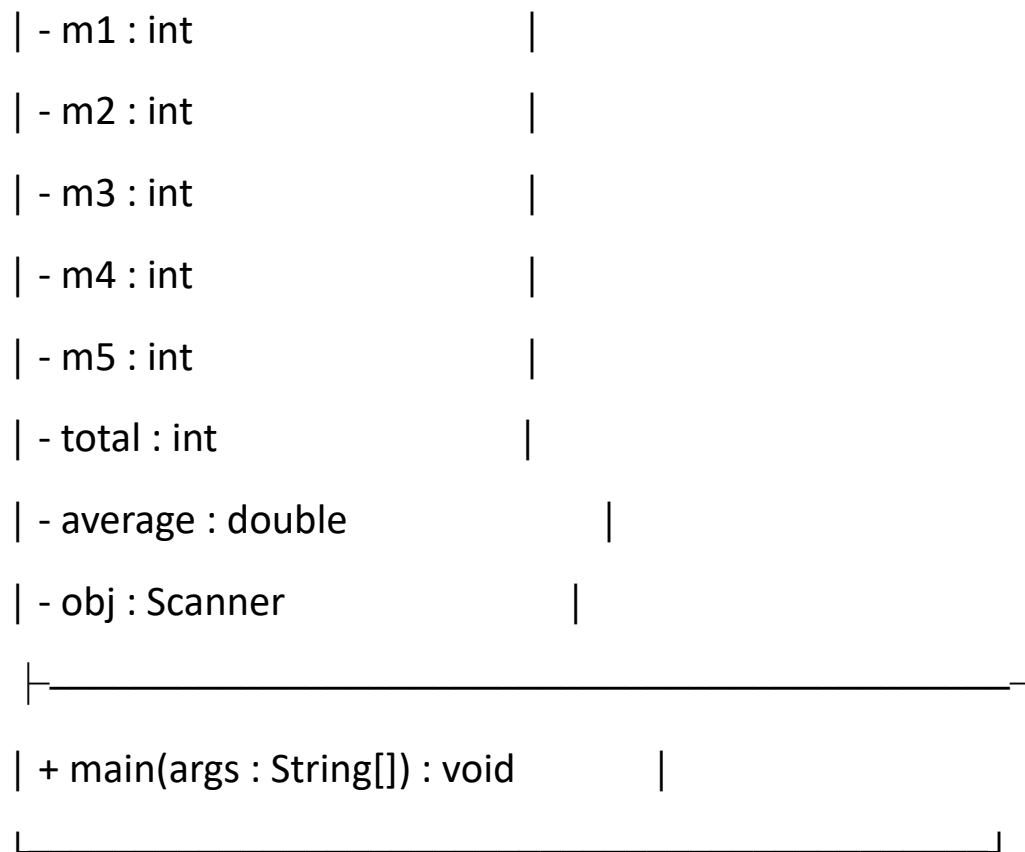

Step 7: Display the total marks.

Step 8: Display the average marks.

Step 9: Stop the program.

UML CLASS DIAGRAM

CODE :

```
package javacore;

import java.util.Scanner;

public class ClassMarks {

    public static void main(String[] args) {

        Scanner obj = new Scanner(System.in);

        System.out.print("Enter Mark 1: ");

        int m1 = obj.nextInt();
```

```
System.out.print("Enter Mark 2: ");  
int m2 = obj.nextInt();  
  
System.out.print("Enter Mark 3: ");  
int m3 = obj.nextInt();  
  
System.out.print("Enter Mark 4: ");  
int m4 = obj.nextInt();  
  
System.out.print("Enter Mark 5: ");  
int m5 = obj.nextInt();  
  
int total = m1 + m2 + m3 + m4 + m5;  
double average = total / 5.0;  
  
System.out.println("Total = " + total);  
System.out.println("Average = " + average);  
}  
}
```

5. OUTPUT SCREENSHOT(SAMPLE RUN):

For example, if the user enters:

Mark 1 = 85

Mark 2 = 90

Mark 3 = 78

Mark 4 = 88

Mark 5 = 95

The calculation is:

Total = 85 + 90 + 78 + 88 + 95

= 436

Average = 436 / 5

= 87.2

Sample Console Output

Enter Mark 1: 85

Enter Mark 2: 90

Enter Mark 3: 78

Enter Mark 4: 88

Enter Mark 5: 95

Total = 436

Average = 87.2
